

# Custom Sizes in AdManager Pro

Custom sizes can be entered through AMP.

1. On the Extended Attributes screen, chose T for #4 - Ad Width.
2. In the Actual Width box, enter the width in inches. (e.g. 5.5, number only)
3. No matter what the columns say on the first screen, Xpance will size the ad according to the actual width. If #4 does not have a T, then it won't work.
